Course Information

Fire is never a kind master. While useful, fire can harm humans and property and everyone should learn how to handle it cautiously. Proper preparation and knowledge about what to do during fire outbreaks help to reduce property damage and avoid injury and fatalities. Fire safety design entails meticulous planning to integrate multiple systems to manage various scenarios to ensure maximum safety. This health and safety training course teaches you how to prevent fires and protect property and people during emergencies.

We lay out the principles and practices that define proper fire prevention and provide mitigation techniques, training and education. We explain how to use fire equipment and implement fire detection and alarm systems. The course also discusses fire suppression systems and shows you how to control fires in residential buildings, storage facilities and workplaces. We describe the methods and approaches used to ensure safety by preventing and mitigating fire incidents.

After explaining how to reduce fire risks by putting safety measures in place, we demonstrate how to handle fire crises effectively. We show you how to determine the point of origin of a fire, safeguard evidence and prevent future fire incidents in homes and workplaces. Mastering fire safety is useful for safety officers and other health and safety professionals but this course suits anyone who wants to protect themselves and others from the risks associated with fires. Sign up to earn a fire safety diploma and learn how to manage fire hazards and respond in the case of an emergency to protect yourself and others.

Modules Studied

Module 1: Fire Safety Legislations and Emergency Response

Module 2: Fire Risk Management and Safety Systems Design

Module 3: Course assessment
